Subject: Fracking Websites

Here's the one I was thinking. Frac Focus <http://fracfocus.org/> This is the site that fracking companies supposedly put information on what they used in their frac jobs. I haven't used it much, but anyone can probably play with it and find out more. There's a good list under Chemical Use and What Chemicals Are Used of different chemicals, CAS #, purpose and product function.

Also, under the The Endocrine Disruption Exchange (TEDX) there's a big list of chemicals used throughout the different parts of the drilling process. <http://www.endocrinedisruption.com/home.php> Under Chemicals Used in Natural Gas Operations and Drilling Chemicals, you can download their list of down hole chemicals. We used this list as a starting point for our Pavillion GW study. Frac Focus hadn't really got going at that point.

That's what I have so far that could help them.

Let me know if they have any further questions. I think the Frac Focus site would be most helpful.
